Bs. As, Argentina. UE citizen and open to relocation

Technical Product Manager skilled at leading cross-functional teams in high-uncertainty environments, defining processes from scratch and translating customer and business needs into requirements. I have scaled products from MVP to enterprise-grade operations (0 → 1), with a strong focus on AI-powered products.

## EXPERIENCE

### Technical Product Manager at EVOCs | Nov 2024 - Jun 2026

Stripe Postman APIs Azure Claude

- Owned the full product lifecycle of AI-powered solutions for data centers, from market discovery and solution design to technical implementation and rollout plan.
- Productized an access-review governance product that reduced access review cycle time by 60% through workflow automation and centralized audit logging across 10,000+ records. I defined the go-to-market strategy and shaped a roadmap with 2 deployment models based on target segment needs: a multitenant SaaS MVP and an on-premise version for compliance-heavy companies.
- Built the Innovation team's operating model from scratch, introducing documentation artifacts (PRD, BRD, Tech Specs) and AI usage standards that reduced time-to-delivery by 30% and enabled the company to qualify as an official Anthropic partner.
- Scaled a healthcare job board from free MVP to a monetized product, including integrations with Greenhouse, Stripe and Klaviyo. Defined implementation flows, API contracts, endpoint usage and acceptance criteria, exceeding ROI targets and securing the startup's next funding round.

### Technical Product Owner at Flexiti | April 2020 - Feb 2024

Azure Databricks APIs SQL G. Analytics G. Tag Manager

- I guided multidisciplinary teams (30+ people) working on a high-traffic fintech product.
- I supervised the migration from on-premises servers to the Azure + Databricks ecosystem, which reduced infrastructure costs by 10% and improved data accessibility. I directed the phased migration plan and pipeline orchestration, ensuring operational continuity, compliance, data security and cost-efficiency.
- I proposed and implemented a new triage process, reducing support tickets by 15% and cutting bug resolution time from 5 to 3 weeks.
- I built dashboards and reports to analyze user behavior data and integrated insights into the product cycle, achieving a 25% reduction in abandoned carts for our top merchants.
- I led the development of the credit scoring model based on Machine Learning, refining the algorithm and delinquency thresholds.

### DX Product Manager at Mercado Libre | 2019 - Feb 2020

HTML CSS Node.js PHP Tableau

- Led research into the Mercado Pago integrator experience (A/B testing with Optimize) and translated insights into improvements to technical documentation, SDKs and sandboxes.

### Sr. Business Analyst at Grupo FV | 2015 - 2018

PowerBI Big Query Azure Power Query SQL

- Developed reports and dashboards to monitor sales funnels and marketing campaign performance, generating insights that optimized investment and data-driven decisions across Marketing, Sales and Engineering.

## EDUCATION

- Anthropic Partner Enablement Track **Anthropic | 2026**
- AI Product Manager Certificate **IBM | 2026**
- Data Science and AI Engineering B.S. **ISTEA | 2024 - ON GOING**
- Backend Postgraduate Diploma **UTN | 2021**
- Communications B.S. **Universidad de San Andrés | 2012-2015**

## SKILLS

- Data:** Azure, Databricks, PowerBI, BigQuery.
- Productivity and UX:** Jira, Confluence, Miro, Figma, Hotjar.
- Dev.** HTML, CSS, Javascript, Python, SQL, Claude Code.
- English:** Advanced level.
